EDUCATION

Defensive Cybersecurity Program
Calbright College - Online

May 2027
Sacramento, CA

Information Technology Support (A+) & Networks (Network+)
Calbright College - Online

May 2026
Sacramento, CA

Bachelor of Science in Computer Science
California State University, Stanislaus

May 2024
Turlock, CA

Relevant Coursework: Artificial Intelligence, Coding and Information Theory, Compiler Theory, Computer Organization, E-Commerce System Design, Human-Centered Design, Operating Systems, Data Structures and Algorithms

Associate of Arts in General Studies: Language and Rationality
Modesto Junior College

May 2021
Modesto, CA

Relevant Coursework: Assembly Language, Discrete Structures, Intro to Programming, Probability and Statistics, Problem Solving/Programming I & II, Programming with Visual Basic

SKILLS

- **Programming languages:** Bash/Shell, C++ (Multithreading), C#, HTML/CSS, JavaScript (ES6+), Python, SQL (MySQL, SQL Server), TypeScript
- **Frameworks & Libraries:** ASP.NET Core, Next.js, React.js, Express.js, Tailwind CSS, Bootstrap
- **Data Science & Analysis:** Pandas, NumPy, PyTorch, Sklearn, Matplotlib, BeautifulSoup, NetworkX
- **Cloud & Databases:** AWS (EC2, S3, DynamoDB, Lambda), PostgreSQL, MongoDB, Pinecone, Google Colab
- **Development Tools:** Git, VS Code, Postman, Jupyter, Figma, Microsoft Office Suite

EXPERIENCE

AI Trainer – Multimodal Systems

Handshake AI

May 2026 – Present

Technical fellowship focused on advanced AI model optimization

- Develop and evaluate domain-specific prompts to optimize large language model (LLM) performance across multi-format data streams, including web architecture, audio, and visual systems
- Analyze model outputs for technical accuracy, layout alignment, and structural integrity within computer science fields
- Perform logical validation and root-cause analysis to evaluate model behavior and improve output quality
- Conduct independent technical research to support prompt engineering workflows and document model system behavior

Volunteer Web Developer

Inverum Institute

July 2025 – May 2026

Nonprofit initiative supporting educators and institutions in responsible AI use

- Maintained and updated a development-stage website, troubleshooting functional and configuration issues during testing
- Worked with non-technical stakeholders to gather requirements and translate them into technical changes
- Documented system setup, deployment steps, and technical decisions to support future maintenance
- Monitored application behavior during development and implemented fixes to improve stability and accessibility

Freelance Back-End Developer

Healthcare Startup

October 2024 – Dec 2024

Healthcare Application – Similarity Search | AWS, FAISS, Colab, NetworkX, NumPy, Pandas, Pinecone, Python

- Built an ML model using FAISS to compare extracted symptoms against a Pinecone database, predicting likely diseases
- Deployed and tested the application in a cloud environment using AWS
- Diagnosed and resolved application configuration issues affecting ML pipeline performance
- Coordinated with team members to identify and resolve performance problems
- Validated system outputs and documented findings for developers

Full-Stack Software Development Intern**Bay Valley Tech****February 2024 – August 2024**

Communication Web Platform | Cloudinary, Next.js, PostgreSQL, Tailwind, TypeScript

<https://bit.ly/3AhZw33>

- Developed full-stack features using Next.js, TypeScript, PostgreSQL, Prisma, and Tailwind CSS
- Implemented authentication, database operations, and responsive UI components
- Collaborated with five developers using Agile workflows and Git version control
- Debugged application issues and optimized performance across frontend and backend components
- Adapted to dynamic requirements by leveraging Agile methodologies throughout the project lifecycle

Undergraduate Research Assistant**CSU, Stanislaus****June 2022 – May 2023**

Artificial Intelligence & Data Science Focus | Python, Pytorch, NetworkX

- Social Network Analysis (SNA): Implemented a predictive network topology model using NetworkX and Python to simulate and analyze the algorithmic spread of misinformation across data nodes
- Sentiment Analysis & NLP: Built a sentiment analysis model using a PyTorch neural network to evaluate customer datasets scraped via BeautifulSoup with over 95% accuracy
- Population Forecasting: Developed an AI predictive model utilizing Markov chains to analyze population data shifts and inform regional infrastructure planning
- Environment Troubleshooting: Configured and maintained predictive model execution environments across both Windows and Linux systems to resolve data processing defects

PROJECTS**Employee Directory App** | Amazon EC2, Amazon S3, Amazon VPC, DynamoDB, Application Load Balancer**AWS DevOps Specialization, August 2024 – September 2024**

- Designed, configured, and deployed a highly available, scalable web infrastructure on AWS utilizing EC2, Application Load Balancers, and Auto Scaling groups
- Implemented a secure network topology utilizing a custom VPC, structured public/private subnets, and robust IAM security policies
- Managed database persistence using Amazon DynamoDB and configured S3 buckets for efficient static asset storage

FireTube - Video | Express.js, MongoDB, Node.js, React.js<https://bit.ly/3ZMUcQ6>**Bay Valley Tech, January 2024 – March 2024**

- Developed a fully responsive, full-stack online video platform for diverse devices
- This platform allows users to upload videos, like and dislike content, comment on videos, subscribe to channels, and search for videos by title
- User-uploaded raw videos are processed and stored on Firebase. User and video data are stored on MongoDB

Concurrent File Processing | C++, Multithreading**California State University – Stanislaus, Fall 2023**

- Designed and implemented a multithreaded C++ program to optimize file operations, achieving a 42% reduction in processing times compared to single-threaded execution
- Processed large datasets with thread-safe data structures to ensure accurate extraction and analysis of word frequencies across multiple files
- Utilized modern C++ standard libraries for efficient multithreading and synchronization, including `std::thread`, `std::mutex`, and `std::unordered_set`
- Demonstrated scalability and performance improvements by benchmarking single-threaded vs. multithreaded execution times

Video Game Retrieval System | Data Structures, OOP, Python<https://bit.ly/3Bh8A5p>**California State University – Stanislaus, Spring 2022**

- Developed a Python-based software tool to enhance gamers' experiences, enabling seamless updates to a .csv file
- Instant user notifications via the interface are triggered upon modifications to specific video game titles, streamlining continuous updates or changes

CERTIFICATIONS

- *CompTIA Network+ – Expected August 2026*
- *CompTIA A+ Certified – June 2025*
- *DevOps on AWS Specialization - October 2024 (Coursera)*
- *.NET FullStack Development Specialization - September 2024 (Coursera)*
